

SE 216 – SOFTWARE PROJECT MANAGEMENT
SOFTWARE MEASUREMENTS DOCUMENT

PROJECT NAME: StorySphere: A Safe and Interactive Digital Platform for Writers and Readers

GROUP NUMBER and MEMBERS: Group-1 : Efe Şahin, Selcen Aksu, Azra Bayhan, Berkay Gökce, Ayça Baygar, İsmet Eren Çetin, Zeynep Ekin Zengin

Questions to identify measurements:

- 1. How effective was the story discovery and search system?**
- 2. How good was the quality and stability of the platform during testing?**
- 3. Did the project progress according to the planned sprint schedule?**
- 4. How effective was the real-time collaboration system?**
- 5. How effective were AI-supported features such as translation and writing assistance?**

Identified measurements:

Question 1:

- Average search response time
- Number of successful search results returned
- Search usage count per week

Question 2:

- Number of defects found during testing
- Number of critical bugs
- System crash count during testing

Question 3:

- Planned sprint completion date vs actual completion date
- Completed backlog items / planned backlog items ×100

SE 216 – SOFTWARE PROJECT MANAGEMENT
SOFTWARE MEASUREMENTS DOCUMENT

Question 4:

- Real-time synchronization delay
- Number of synchronization failures
- Average message delivery time in shared sessions

Question 5:

- Number of successful story translations
- Number of accepted AI writing suggestions
- Average AI response time

Measurement storage and collection:

What: Search system performance

When: After each search request

How: Logged in backend performance monitoring system

What: Bugs and system crashes

When: Whenever found during testing

How: Recorded in GitHub Issues or shared defect tracking system

What: Sprint progress data

When: End of each sprint

How: Recorded in ClickUp / Sprint tracking sheet

What: Synchronization and communication performance data

When: During collaborative editing and shared reading sessions

How: Automatically logged in backend monitoring system and WebSocket server logs

What: AI feature usage data

When: Whenever AI tools are used

How: Logged in system analytics database

SE 216 – SOFTWARE PROJECT MANAGEMENT
SOFTWARE MEASUREMENTS DOCUMENT

Measurement Type	Description	Example Measurements
Search Performance	Measures speed and effectiveness of story search system	Average response time: 1.6 sec
Quality	Measures defects and system stability	6 bugs found, 1 critical bug
Schedule & Progress	Measures sprint progress against planned timeline	For sprint 2, 4/5 tasks completed = %80
Real-Time Collaboration Efficiency	Measures responsiveness and stability of real-time collaboration features	Sync delay: 0.8 sec, Failure rate: 3%
AI Success	Measures effectiveness of AI tools	Translation success rate: 93% AI suggestion acceptance rate: 75%
