SE 216 – SOFTWARE PROJECT MANAGEMENT
REQUIREMENTS DOCUMENT

PROJECT NAME: StorySphere: A Safe and Interactive Digital Platform for Writers and Readers

GROUP MEMBERS: Efe Şahin, Selcen Aksu, Azra Bayhan, Berkay Gökçe, İsmet Eren Çetin, Ayça Baygar, Zeynep Ekin Zengin

REQ. #	FUNCTIONAL REQUIREMENTS
1	The system must allow users to securely register, log in, log out of their accounts and must verify the age of users through identity verification before allowing access to adult (+18) content.
2	Authors must be able to create and manage personal profiles, including biography, posts, external book links, live streaming, and chat rooms to interact with readers.
3	Authors must be able to publish, edit, and delete stories on the platform.
4	Multiple authors must be able to collaborate on stories in real-time or asynchronously
5	Readers must be able to highlight quotes and bookmark them for later reference.
6	Readers must be able to rate stories and leave reviews or comments.
7	Users must be able to read stories together with friends using the Blend reading feature.
8	The system must support multiple content formats including text stories, manga-style visuals, and audiobooks.

9	Users must be able to search and filter stories by character name, profession, theme, or genre.
10	The system must provide AI-supported features such as story translation and writing suggestions.
REQ. #	**NON-FUNCTIONAL REQUIREMENTS**
1	The system must load pages within 2 seconds under normal network conditions.
2	The system must maintain at least 99.9% uptime to ensure high availability.
3	User authentication and personal data must be protected using secure protocols and encryption.
4	The system must handle increasing numbers of users without performance degradation.
5	The system must be compatible with modern web browsers and mobile devices.
6	Automatic daily backups must be performed to prevent loss or unauthorized modification of user data and stories.
7	The system must detect and filter inappropriate or offensive content accurately and automatically.
8	Search results must be returned within 3 seconds to maintain responsiveness.
9	The system must maintain data integrity and prevent unauthorized changes to stored information.

10	The system must support adjustable reading options, multiple languages, and a simple design to improve accessibility.
